(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		ion)		
F 0554	Allow residents to self-administer of	lrugs if determined clinically appropriat	e.		
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS HAVE BEEN EDITED TO PROTECT CONFIDENTIALITY** 39086 Based on observation, interview, and record review conducted during a Standard survey completed on				
Residents Affected - Few	6/28/24, the facility did not ensure a resident was assessed by the interdisciplinary team to determine a resident's ability to safely administer their own medications if clinically appropriate for one (Resident #12) of one resident reviewed. Specifically, Resident #12 was observed with medications in their room and self-administered those medications without being evaluated as to whether they could safely do so.				
	The findings are:				
	The policy and procedure titled Self-Administration of Medications revised on 11/23/21 documented that each resident is given a detailed explanation of the medications that they may self-administer, the reason for the medication, what to expect, and the possible side effects within their cognitive ability to understand. Staff re-evaluates the resident's knowledge by having the resident report their understanding of the information presented to them. The self-administration of medication is monitored by the Team Leader. Continued approval of the self-administration of medication by the resident is dependent on the resident's compliance with physician orders and facility procedures.				
	Resident #12 diagnoses which included peripheral neuropathy (disorder affecting the nervous system), intraspinal abscess (swelling, inflammation, and collection of infected material in or around the spinal cord), and glaucoma (progressive eye disease that can cause vision loss). The Minimum Data Set (MDS- a resident assessment) dated 4/16/24 documented Resident #12 was understood, understands and was cognitively intact.				
	The Comprehensive Care Plan with last review date of 4/23/24, documented for nursing to administer ophthalmic (having to do with the eye) medication per physician's order. Documented in the section titled decision making stated to store medications at bedside for self-administration.				
	During an interview on 6/24/24 at 11:11 AM, Resident #12 stated they self-administered their own eye drops for glaucoma.				
	During observation of Resident #12's room and interview on 6/26/24 at 10:52 AM, revealed one bottle of Latanoprost 0.005% (used to treat glaucoma), one bottle of Dorzolamide HCL 2% (used to treat glaucoma), and one bottle of Refresh Tears 0.5% (used to treat dry eyes) stored in a clear zip lock bag taped onto the over the bed table. Resident #12 stated they administered their own eyedrops daily.				
	(continued on next page)				

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

F 0600	Protect each resident from all types and neglect by anybody.	s of abuse such as physical, mental, se	exual abuse, physical punishment,
Level of Harm - Minimal harm or potential for actual harm	39086		
Residents Affected - Few	Based on observation, interview and record review conducted during a Standard survey completed on 6/28/24, the facility did not ensure that a resident is free from abuse, neglect or exploitation for one (Resident #71) of five residents reviewed for abuse and neglect. Specifically, a Certified Nurse Aide did not follow Resident #71's care plan when they transferred the resident using a mechanical lift by themselves and the resident sustained an injury to their left lower leg.		
	The finding is:		
	The policy and procedure titled Abuse Prohibition revised on 2/2023, documented that residents have the right to be free from verbal, sexual, physical, mental abuse, mistreatment, neglect, involuntary seclusion, misappropriation of property, and exploitation. The policy and procedure titled Facility Incident, Abuse Investigation and Reporting dated 6/7/23 documented neglect was defined as the failure of the facility or its employees to provide goods and services to a resident that are necessary to avoid physical harm or pain. Resident #71 was admitted to the facility with diagnoses of stroke and hemiplegia (one sided paralysis caused by a brain or spinal cord injury). Review of the Minimum Data Set (a resident assessment tool) dated 4/9/24 documented that the resident was cognitively intact, understood by others, understands others, and was dependent on others for transfers.		
	Review of Resident #71's comprehensive care plan dated 4/16/24 documented that the resident had related to transfer due to limited mobility, activity intolerance, limited range of motion, and cerebrova accident (stroke). The comprehensive care plan documented that Resident #71 required an assist of staff members using a sit to stand lift (allows resident to go from a seated position to a standing post during transfers).		e of motion, and cerebrovascular nt #71 required an assist of two
	Review of a Physical Therapy evaluation dated 4/3/24 documented that Resident #71 required a minimum assistance of two staff members with a manual sit to stand lift for transfers between their wheelchair and their bed.		
	Review of a visual/beside Kardex report (a tool used by staff to guide care) dated 4/15/24 for Resident #71 documented that the resident required an assist of two staff members for transfers between the resident's wheelchair and the resident's bed.		
	noticed an area on the back of Res	dated 5/13/24 at 9:37 PM, documented sident #71's left calf. The resident stated at was the cause. The area was asses	d that Certified Nurse Aide #1

F 0881	Implement a program that monitors	antibiotic use.	
Level of Harm - Minimal harm or potential for actual harm	39086		
Residents Affected - Few	Based on record review and interviews conducted during the Standard survey completed on 6/28/24, the facility did not ensure that the facility's infection prevention and control program included antibiotic use protocols and a system to monitor antibiotic use for one (Resident #12) of one resident reviewed. Specifically, Resident #12 received prophylactic Rifampin and Bactrim (antibiotics) since 10/18/22 and there was no ongoing monitoring by the Antibiotic Stewardship Program including laboratory tests, communication, or appointments with the Infectious Disease Physician.		
	The finding is:		
	Review of the policy and procedure titled Antibiotic Stewardship Program dated 5/2017, documented that the antibiotic stewardship program promotes the appropriate use of antimicrobials, improves patient outcomes, reduces microbial resistance, and decrease the spread of infections caused by multidrug-resistant organisms. The goal of antibiotic stewardship is to optimize the treatment of infections and clinical outcome while minimizing unintended consequences of antibiotic use. The facility has a quality assessment and assurance committee that will review the antibiotic and resistance data. The Administrator, Medical Director Director of Nursing Services, and Consultant Pharmacist are responsible for antibiotic stewardship in the facility. The Consultant Pharmacist reviews every antibiotic that is prescribed in the facility under the Drug Regimen Review and will report to the quality assessment and assurance committee on antibiotic use, agents, dose, and duration of use.		bials, improves patient outcomes, ed by multidrug-resistant of infections and clinical outcomes has a quality assessment and the Administrator, Medical Director, for antibiotic stewardship in the bed in the facility under the Drug
