F 0689 Level of Harm - Actual harm Residents Affected - Few	*01/10/25 at 6:02 a.m., (late entry for a call received at approximately 2:45 a.m.), Facility phone rang and it was the ER [emergency room] nurse from the hospital. We were asked if there were any of our resident's [sic] missing, as the ambulance was dispatched for an elderly man in his socks and brief. This nurse stated that there have been no alarms that havegone [sic] off as the door [sic] all have alarms on them. After call ended, all staff went and looked in rooms. This nurse found resident's [Resident #1] room to be empty. This shift he had been to the nurses [sic] station multiple times to ask for coffee. He would then go to his room, or to the recliner to watch TV. Resident was not found in the building. This nurse called ER back and stated that we could not find this particular resident. Gave the ER nurse a description of resident and name. While on the phone with the ER, the nurse stated that the resident was able to give his name and it was our resident. Ambulance was going to transport resident to ER to get a full check-up. *01/10/25 at 9:03 a.m., returned to [facility] from the hospital ER [sic]. When asked how he was able to get out .said 'll just walked out' but he could not recall where and when. [Resident #1] stated that it was 'dark and cold' and when he asked if he fell he stated 'more than once.' There were no scrapes or bruises on his head. He has a tegaderm [transparent dressing] on his right wrist, and he has scrapes on the second, third and forth [sic] digits on his right hand. The left hand has scrapes on the second digit/index finger. The left knee is scraped, the right knee is scraped. The right great toe is missing the toenail. *01/11/25 at 2:16 a.m., Resident has a blister that has formed on his right second digit/index finger. The lip of the thumb is also reddened and firm. He has complaints of pain/discomfort of that thumb. Clear dressing was applied to the blister for now. The blister is fluid filled and intact. Blister may be related to latent frost bite effects. Paperwork fr

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)			
F 0689	* An audit of all emergency exit door alarms on 01/10/25 showed two of six door alarms were not engaged.			
Level of Harm - Actual harm	* Initiation of documented checks of all emergency exit alarms on each shift to ensure alarms are engaged began on 01/10/25.			
Residents Affected - Few	* Initiation of documented 30-minute visual checks on Resident #1 began on 01/10/25 upon return from ER.			
	Further review of Resident #1's nurses' notes identified the following:			
	* 01/14/25 at 2:53 a.m., Resident was reported by CNA [certified nurse aide] to be outside from the patio door. He was shaking the fence at the gate trying to get it open. He walked out with no coat on and no shoes. Just had grip socks on. CNA was able to redirect him back inside and resident cooperated with the redirection. CNA reported that the resident stated he was trying to go home.			
	Observation on 01/14/25 at 9:36 a.m. showed a staff member (#4) opened the patio door. The alarms failed to sound. The staff member (#4) identified both alarms were battery powered and he needed to replace them. The staff member (#4) stated he noticed he noted the alarms to sound funny on 01/13/25 and indicated he planned to replace the batteries on 01/13/25 but failed to do so.			
	Review of the facility camera footage occurred on 01/14/24 at 2:10 p.m. with an administrative staff member (#1). The footage showed Resident #1 exited the patio door at 1:16 a.m., the door alarms failed to sound. A CNA (#7) exited the nurses' station report room approximately one minute later at 1:17 a.m. and redirected the resident back into the facility.			
	Observation of all facility doors and door alarms occurred on the morning of 01/14/25 and showed 12 exit doors with three different alarm systems in place. The six emergency exit doors (door 1A, 2A, 2B, 3A, 3B, and 4A) showed alarms that required a key to turn the alarm on and off. Resident #1 eloped from door 4A. Four doors (main entrance, door 2, 3, and 4) utilized the wander guard alarm system. The two remaining doors, one leading onto the enclosed patio, and one on the east side of the building, utilized two window/door alarms on each door. Audit forms for all emergency exit doors attached to each emergency exit and showed sign off each shift for engagement of the alarm. All emergency exit alarms were in on position.			
	During an interview on 01/14/25 at 9:00 a.m., an administrative staff member (#1) confirmed two of the emergency exit door alarms were in the off position when checked by her on 01/10/25. She stated the only way to clear/stop the alarm sound required staff to turn it off then back on with the key, and the nurses and maintenance staff have keys to reset the alarms. She stated she expected staff to check the function of all door alarms weekly and confirmed the facility lacked documentation of the weekly alarm function tests.
